

Stella Garcia

## Scenario:

You are a coach of a competitive tennis team who wants to expand their competition to encompass more teams than you are currently competing against.

Task #1: Schedule a competitive tennis match against Team 2 to be played next Wednesday.

Task #2: View the log of your previous games.

Task #3: Look at the team information and update it by adding another player.

Notes:

What changes should I make to my app?

- For scheduling, add a part about what age level you want to compete against.
- Also for scheduling, add a part where the user can select/find a venue to compete at (maybe a section to find referees as well).
- Add a sort option in the previous game section.

What do I need to keep the same about my app?

- Finding/editing information about the team is very easy, so keep that the same.
- All of my pages have home buttons which allows the user to move easily throughout the app.
- The scheduling section has a list of suggested teams, which makes it user for a user who wants to compete more but does not know who to compete against.
